Part 5 - Plot Results	. 4

## Roshan Jaiswal-Ferri & Stefan Rosu

```
%Section - 01
%Aero 421 FP4: 5/2/25
%Note: This was prepared with the help of Dr. Mehiel's Template script
```

# **Workspace Prep**

# **Part 1 - Mass Properties**

```
% Mass properties for normal operations phase
% Calculate the total mass, inertia and Center of Mass of the MehielSat
% You will need to change this
zbar = 0.23438;
cm = [0; 0; zbar];
total mass = 640;
J.sc = [812.0396]
                                           0
       0
              545.3729
                           627.70831;
% fprintf('The spacecraft mass for the normal operations mode is:\n')
% display(total mass)
% fprintf('The spacecraft center of mass for the normal operations mode
is:\n')
% display(cm)
% fprintf('The Inertia Matrix for the normal operations mode is:\n')
% display(J)
```

# Part 2 - Geometric Properties of MehielSat during Normal Operations

```
% Define the sun in F ECI and residual dipole moment in F b
sun ECI = [0 0 -1];
% I constructed a matrix where the rows represent each surface of the
% MehielSat. The first column stores the Area of the surface, the next
% three columns define the normal vector of that surface in F b, and the
% final three columns store the center of presure of the surface (geometric
% center of the surface) in F b.
% First get rhos vectors with respect to the center of the spacecraft bus
% the MehielSat BUS is a box
Areas = 4*ones(6,1);
normals = [1 \ 0 \ 0; \ -1 \ 0 \ 0; \ 0 \ 1 \ 0; \ 0 \ -1 \ 0; \ 0 \ 0 \ 1; \ 0 \ 0 \ -1];
cps = [1 \ 0 \ 0; -1 \ 0 \ 0; \ 0 \ 1 \ 0; \ 0 \ -1 \ 0; \ 0 \ 0 \ 1; \ 0 \ 0 \ -1];
% Append geometric properties for Solar Panel 1
Areas1 = 6*ones(2,1);
normals1 = [0 \ 0 \ 1; \ 0 \ 0 \ -1];
cps1 = [0 \ 2.5 \ 0.005/2; \ 0 \ 2.5 \ -0.005/2]; \%  Fix this
% Append geometric properties for Solar Panel 2
Areas2 = 6*ones(2,1);
normals2 = [0 \ 0 \ 1; \ 0 \ 0 \ -1];
cps2 = [0 -2.5 \ 0.005/2; \ 0 -2.5 \ -0.005/2]; % Do I need to use actual position
of geo-center, or just the axis?
% Append geometric properties for Sensor
Areas3 = [0.25*ones(4,1); 0.25*0.25];
normals3 = [1 \ 0 \ 0; \ 0 \ 1 \ 0; \ -1 \ 0 \ 0; \ 0 \ -1 \ 0; \ 0 \ 0 \ 1];
cps3 = [0 \ 0.25/2 \ 1.5; \ 0.25/2 \ 0 \ 1.5; \ -0.25/2 \ 0 \ 1.5; \ 0 \ -0.25/2 \ 1.5; \ 0 \ 0 \ 2];
% now subtract the center of mass to get the location of the rho vectors
% with respect to the center of mass
normals = normals - [0 0 zbar];
normals1 = normals1 - [0 0 zbar];
normals2 = normals2 - [0 0 zbar];
normals3 = normals3 - [0 0 zbar];
cps = cps - cm';
cps1 = cps1 - cm';
cps2 = cps2 - cm';
cps3 = cps3 - cm';
% Now build the matrix
surfaceProperties = [Areas cps normals;
                      Areas1 cps1 normals1;
                      Areas2 cps2 normals2;
                      Areas3 cps3 normals3];
```

# Part 3 - Initialize Simulation States

```
% Current JD - has to be on the solar equinox, why? - we'll use 3/20/2024
% from https://aa.usno.navy.mil/data/JulianDate
% Need this so we can convert from F ECEF to F ECI and to F b for the
% magnetic field model
JD 0 = 2460390;
% Spacecraft Orbit Properties
mu = 398600; % km^3/s^2
h = 53335.2; % km^2/s
e = 0; % none
Omega = 0*pi/180; % radians
